Cars24 – Data scientist

DE Shaw-FinRes Alyst

	1 Technical rounds before Fil Interview	2.1 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.2 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.3 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	3.1 Duration of Fil Interview	3.2 Areas covered in the Fil Interview?	3.3 Fil Interview Experience.	4 HR Questions asked.	5 Helpful Preparation strategy, material, topics etc
	0				45 mins	Work experience/Past Education, Projects done during PGDBA, Puzzles, Subjects studied at ISI, Subjects studied at IIT, ML/AI related questions not taught in the course, Question based on CV	It was not a stress interview, though it was very technical. Nothing business related as such. Not a single course from IIM Calcutta helped. I answered all I could, kept saying no where I didn't knew the answer.	Negotiation on the post that they offer, like I was asked if they make me senior data scientist, how will I tackle with project deliverables as I had no prior experience of the domain.	Resume building helps, competitions are necessary, they asked me what I had learnt from competitions. ISLR should be thoroughly done. Francois cholet for deep learning.
	0	Picked up projects from my resume, asked me tell about my approach, the techniques & methods employed, evaluation metrics. Also had a discussion on the features	Questions related to linear / logistics regression - evaluation metrics. Overfitting in tree based methods & how to deal with them.	Why change of field? if you were to go back, tell us the use cases where you can apply knowledge gained from this course?	40 minutes	Work experience/Past Education, Projects done during PGDBA, Questions pertaining to the company/industry or role offered by the company	It was good - felt but heavy on technical side. Had to convince them how the use cases can be employed in construction industry.		Be thorough with islr, different parameters in different ml models & their use. Showcase your projects as a real world use case, have a good understanding on type of features available. Never underestimate linear / logistic regression.
	1	Bias variance trade off, type 1 error, type 2 error, recall,precision and basic concepts of machine learning	Given a scerio would you go for precision or recall, explain bias variance trade off. Few questions on linear regression		20 to 25mins	Work experience/Past Education, Projects done during PGDBA, Guesstimates, Subjects studied at IIT, Question based on CV		No HR questions asked	Spend time on resume preparation, be aware of each and every word mentioned in resume
	1	- What is TF-IDF? What problem it solved? What are other ways of vectorization? - What is LSTM? (Full form followed by number of layers and why you chose to use it?) No in depth/Architecture based questioning!! - What is ive bayes theorem? What are assumptions? Pros and cons? - Basic probability questions- puzzle on poison distribution		More questions on work ex - What is the size of data collected by Airtel every day (estimate)? How much did you collect for your project? Infrastructure required for processing ?	20 mins	Work experience/Past Education, Projects done during PGDBA, Past Projects, Case study, Puzzles, General Awareness	Case study- Number of word-wide users using Facebook app has gone down from past 7 days. Why ? (Ans- Android has released new OS which had technical issues in sending pop-notification for Facebook app, resulting people didn't get knudge for using FB) Puzzle- Hourglass puzzle (how you measure 9 minute using 4 min & 7 min sand-clock) Questions on modeline Stock Market data (Time series)		Try to have a balanced cv with sufficient work-ex points (if you have), competitions, projects (mix of projects covering almost all the concepts studied) and extra curricular if any.
	0				60 mins	Projects done during PGDBA, Case study, Questions pertaining to the company/industry or role offered by the company, Question based on CV	The interview started with questions based on the projects done during PGDBA and additioal projects. They didn't go into much technical aspects but checked how would I have solved the problem if it was slightly different. Then, the interview went towards case scerios where they gauged the approach for the solution. Then interview mainly revolved around different technical concepts and case based questions	They asked if i'm comfortable working in a startup type culture.	For preparation, form a group and prepare together. Prepare business case studies, guesstimates, puzzles and revise all the technical concepts (no need of going too deep into only technical stuffs). The interviewers mainly try to see the application part, how you are going to apply your knowledge in a business.
	1	No questions from project or competitions in the Round 1	Most questions were on Applied statistics, Fince fundamentals & ML. What is quantitative easing? How and why do the central banks do it ? What is the textbook definition of Recession? Explain recession other than just in terms of GDP. What are bonds? How do the payments occur in Bonds? What is yield? Explain about yield Curve. 2 economies of similar size and attributes are growing at 2% and 8% respectively before CoVID. During CoVID, they both contracted by 10%. Which one will witness a faster GDP growth rate immediately after the CoVID is over and recovery starts? On Linear Regression: Linearity assumption - How to detect if it is violated and how to proceed ahead if it is being violated? What will be the inference on R2 obtained for a fitted model where the true relationship is not linear? When we add power terms of different features in our models, are we not introducing multi-collinearity? Is it necessarily bad to have multi-collinearity? How to detect and resolve it? Tell multiple methods. How do you test for violation of independence of errors assumption? Test statistic used, its formula, range and critical values? What effects can it lead it? Technical Case on Fince: There is a bank loan which is securitised. It is backed by cashflows from a 5 star hotel located in Gurgaon. [Special attention on Gurgaon] What all factors do you assess before making a decision whether De Shaw should buy this loan or not as on Dec. 2020? Carry out a 360 degree alysis.	About the start up that I have worked on earlier. It was a general free-flowing discussion around that mostly centred on the innovation aspect involved in it and the lessons I learnt over there.	50 mins	Work experience/Past Education, Projects done during PGDBA, Case study, Subjects studied at ISI, Subjects studied at IIT, General Awareness, Question based on CV	Most questions were having a flavour of case, even though they were very much technical in ture. There were total 5 cases asked mainly around which all questions revolved. NLP (Cue from the Project) - For a context window of length 5, how are the Word2vec feature embeddings generated and what is the length of the feature embedding vector for n dictionry words. How does the Word2Vec model work. Business-cum-technical Case - ERP based software which collects transaction data of all payments into and out of all hospitals in a state. If you get access to the entire database of this software, how can you make money for DeShaw? Outline your approach in terms of business. Then tell about all the algorithms and alytics techniques that you will use in order to execute your approach. What can be some key attributes of interest? How can the inter-relationships between attributes affect our model. How to remove multi-collinearity bewtween these features. What extra insight does this data provide us over and above what is available in public domain through company records. What kind of biases our model might suffer from due to data problems? How can the missing data problem arise in this case? Inference Case - Famous Survivorship bias case on Bomber aircrafts: https://www.technewsiit.com/hidden-history-abraham-wald-and-survivorship-bias Time Series - Does white noise have to be normal necessarily? If it is not, how do you test it and how do you make it normal? Time Series - What are some of the assumptions that are taken in time-series forecasting models? What are the different tests to check these assumptions? Time Series - How to account for the effect of CoVID in an existing time series model which predicts the sales of your restaurant? Suggest multiple approaches. What are the pros and cons of each of them. Be imaginative. Time Series - How do you decide when to do additive modelling and multiplicative modelling. What's the core difference between them (not in mathematical terms)? NLP case- Given a dataset containing corpus of emails. Around 10% of the words are spelled wrong in it. Your job is to identify all such words. What NLP technique do you use? How do you go about executing it in terms of python pipeline? Further how do you correct these spellings in an automated manner. Use any library. Hint: Any particular distance metric which might help you? Recommender System What are the matrices involved in latent feature factorisation. How do you choose the number of features ? (Project based) From Project - What are the matrices involved in latent feature factorisation. How do you choose the number of features ?	They asked me about the gap of around 4 years in my resume.	It was a serious technical interview with 5 panelsits from different teams of the company. Each of them took turns to grill one by one. The entire emphasis was to check on whether the candidate has actually applied different statistical techniques and how innovative can she be in making use of statistical tools to solve practical problems.
Company and Role Offered	1 Technical rounds before Fil Interview	2.1 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.2 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.3 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	3.1 Duration of Fil Interview	3.2 Areas covered in the Fil Interview?	3.3 Fil Interview Experience.	4 HR Questions asked.	5 Helpful Preparation strategy, material, topics etc
	2	Time Series Project: Forecasting daily number of restaurant visitors (SARIMAX and Holt Winters Models) 1. What types of seasonality? How can you handle multiple seasonality? 2. How to incorporate the effects of holidays for which days might change each year? (Eg: variatr) 3. How to calculate the impact of a holiday period (7 days)? What problem would be there in simple approach of subtracting the previous week's observations? 4. What is an exogenous variable and how can it be incorporated in the model? Same for endogenous variables? Explain cointegration and Casualty. Supervised Learning Projects: Credit Risk and Loan Renewal (Classification Models) 1. Ways to deal with class imbalance problem? Disadvantages of undersampling and oversampling? Explain some methods for both. 2. Ways to decide on the fil 30 variables (initial number of variables was 1800+) 3. Why XGBoost and not a more interpretable model? Would you apply logistic regression in case of ~30 variables? Why or why not? Explain interpretability of decision tree. Reinforcement Learning Project: Multi-Armed Bandits 1. Explain Thompson Sampling? 2. What is conjugate prior? Intuition behind Beta distribution being conjugate prior of Bernoulli/Binomial distribution?	Statistics: 1. What type of distribution(s) does the binomial distribution approximate in case of large n? Logic/Intuition behind these approximations? 2. How to test if the coin is fair or not if you get 30 heads out of total 40 coin tosses? 3. Comparing means of 'n' different populations - What problem might arise if we try to test this using 'n-1' pairwise tests? Linear Regression: 1. Can R-squared be negative? When? 2. Leverage vs Outliers? How to detect them? What impact can they have while applying linear regression? 3. What problems would arise if condition of normality of errors doesn't hold? ML and TS questions were asked only when asked to explain the projects (covered in the Projects Section). No DL questions. 1. Consider a sales dataset of supermarket. How will you forecast the sales and will it be weekly, daily or monthly forecast? What exogenous variable can be used for the alysis? Sales on festival is significantly different from the ones on regular weekends. How will you model that? Impact of covid on the sales forecast? 2. In case of covid data, which metric you will select among F1-score, precision and recall? 3. Asked to solve " Chaos in Bus" puzzle.	Related to the Economics background and the role offered: 1. Growth post-Covid across different sectors? Recovery curve post Covid? Problems being faced by Industries post-covid 2. Demand and price of fuels during lockdowns and post lockdowns 3. Fiscal vs Monetary policy? Fiscal policies that can be introduced by RBI in case of (i) inflation (ii) to increase economic growth? How would these policies affect (i) currency (ii) capital flows? 4. What is quantitative easing? How is it implemented? What impacts it would have on (consumption, savings, investment, currency, foreign investments, exports/imports, capital flows)? Recent steps taken/decided by RBI? 5. Differences between (and examples of) Soft data indicators vs Hard data indicators 6. How would you model (i) Unemployment Rate and (ii) GDP of a country? What factors/features would you consider? what models can be used? Regression or time series? Long run equilibrium vs short term fluctuations?	45 mins	Work experience/Past Education, Projects done during PGDBA, Subjects studied at ISI, Subjects studied at IIT, Questions pertaining to the company/industry or role offered by the company, Question based on CV	Only 2 technical rounds were there with a few HR questions. No case study/guesstimate/puzzle.	1. Why PGDBA and not MBA or any other Master's degree? Why PGDBA after Alytics experience? 2. Why economics and not engineering? 3. Why low CGPA in UG? How come this drastic change in academic record from bachelors to PGDBA?	Resume Shortlisting - Most companies would be shortlisting based only on your profile (Acads/Workex/UG) or test (if conducted). Projects - 1. Won't be much important during the shortlisting but very important during the interview. 2. Mention only those topics/algo in which you are comfortable and try to have a good balance wrt. areas covered. 3. Prepare at least 1-2 projects which you can explain in 3-5 minutes - from business point of view as well as technical.
	2	Questions were asked on project based on Regression: 1.Explain your project and the dataset you used for the project. What new features you created for the alysis? 2.Asked to explain the Polynomial, Lasso, Ridge Regression and VIF alysis 3.What will be the impact of covid on the dataset	Apart from this, there were 2 case studies that were asked. 1.Consider a firm like Bajaj FinServ. It provide Consumer Durable Loans (Loans offered to customers at the time of purchase of costlier items) as well as Insurance. Consider that consumer durable loan dataset for 10 lakh people. Insurance team wants to increase their customers number and it is difficult for them to contact these people individually. So they decided to alyze this dataset for this purpose. From the business perspective, explain how you as the insurance team mager would alyze this dataset to find out the right set of customer for your business. Consider Life Insurance for the purpose of answering this question. 2. There is a dataset of sensors installed in train where data is being collected by sensors installed at doors of metro trains. Each sensor sends 2-5 ping per sec and at each ping, sensor will send 1 when the door is closed and 0 when it is open. Explain how can you use the data for 1. Operation 2. Investment 3 Steps to alyze the data 4. Algorithm to alyze the data 5. Evaluation metric that you will choose for the model.	Relating past experience with alytics, Airline Pricing Case study - approach and modelling	50 min	Work experience/Past Education, Puzzles, Subjects studied at ISI, Subjects studied at IIM, Subjects studied at IIT	1. Explain Yield Curve, GDP and limitations of GDP 2. Reason for transition from ITC to a career in business alytics 3. How will you identify whether two discrete distribution are same or not? Explain KL Divergence 4. Given Y and X, if another feature X*2 is introduced in regression alysis, would it lead to multi-collnearity issues? 5. What is the probability of two chords intersecting in a circle 6. Explain KNN and what will happen to bias and variance upon increasing K?		1.ISLR, Focus on basics and understand it completely. 2.Prepare your resume well. Do not fake any points and be thorough with what you have written in your resume. 3. Build on business knowledge & work on softer aspects.
	0	Project based - LSTM, Attention Layer, Text Preprocessing. Explained one Competition approach and solution	Regression questions in detail, Decision Trees, XG Boost, SVM based questions		60 mins	Work experience/Past Education, Projects done during PGDBA, Case study, Guesstimates, Subjects studied at ISI, Subjects studied at IIM, Subjects studied at IIT, Question based on CV		You did MTech why Alyst role now	ISLR revision is most important, Practice Guesstimates and ISI Basics. Be Prepared for each and every point on your CV
	1	1. Suppose you are provided with the customers' data of an eTravel website. This data consists of demographic information of the customer and their reviews (both text and ratings). How will you make business sense out of it? Also, explain the preprocessing steps involved. 2. Got asked to lay down the important features to differentiate between Hotels (with Price, food, stay being the same for all eligible hotels). 3. Was cross-questioned on the importance of POS tagging for performing sentiment alysis? 4. How will you deal with negation in sentences (ex - He is not good) when performing lexicon-based sentiment alysis? 5. Cross Questioned about how BERT does what it does?	1. What are outliers? How will you identify outliers in univariate settings? 2. How will you identify outliers using Z score if the distribution is skewed? 3. Outlier identification and alysis in a bivariate setup? 4. Explain this project to us (Asset Bubble Prediction). 5. What is Kmeans? Explain the algorithm? Disadvantages, advantages, etc 6. Write us an SQL query for adding a column to a table. 7. Describe important metrics that you would use for the classification problem? 8. Outliers and their effects in Time Series data? 9. What is PCA? Can you use PCA for non-linear data?	1. Tell us about some practical difficulties that you faced in your line of work.	1 hour 5 minutes	Projects done during PGDBA, Guesstimates, Puzzles, Subjects studied at ISI, Subjects studied at IIT, Question based on CV	My first interview went on for about 1.5 hrs, so majority of the technical questions were already covered. In my fil interview I was asked a guesstimate and a puzzle.		1. ISI subjects are very important. 2. ISLR must be covered before interviews. 3. Be confident about your resume. If you've mentioned any competitions be ready to defend them. 4. Be calm and composed throughout the process and try to ask questions to make the interview more engaging.
	1	1. Customer Attrition Project: Which metric was used & why? Follow-up questions on other metrics. Explain the features of dataset and the data cleaning steps involved. Given a case to test the data preparation methods. Detailed discussion on the ML algorithms used. 2. Text Summarization Project: Explain BLEU & ROGUE scores. Since the project involved Deep Learning algorithms, hence asked to cover them and explain the embeddings used. Given a business case based on the project.	Regression, Classification & Time Series concepts.	Asked about my predictive alytics project. Followed up by a lot of situation based questions.	65 mins	Projects done during PGDBA, Case study, Puzzles, Subjects studied at ISI, Subjects studied at IIT, ML/AI related questions not taught in the course, General Awareness, Question based on CV	Timeseries : How to identify multiple seasonality present in the dataset. Followed by a detailed discussion on advanced methods like Fourier Transformation for detecting the seasonality. How to handle missing values in a time series data. How to choose exogenous variables. Regression: Tested basic concepts by a case on daily oil consumption by the vehicles. Discussion evolved from basic to advanced concepts. Also tested concepts on data sampling.	No HR questions as such but was asked a couple of puzzles. How to produce unbiased results by flipping a biased coin. You have a 50 coins laying flat on a table in dark room, each with a head side and a tail side. 10 of them are heads up, 40 are tails up. Split the coins into two piles such that there are the same number of tails in each pile.	Have your basic Statistical concepts crystal clear (Sampling, Hypothesis testing etc.) Have a very clear understanding of Regression concepts. Know the basics of ML algorithms mentioned on your CV rather than running around fancy jargons. Have a good grasp on Timeseries concepts. Understand the basics of models you are using. Focus on making a good CV and do a thorough prep to defend every single thing mentioned on it. Understand the business applications of your projects. Try solving variety of business cases and guesstimates. Discuss the concepts you read among your friends and try to dig deep to have a granular understanding of things. Read ISLR, Casebooks (IIM A,B,C,I & ISB) & refer RTSM Timeseries notes.
	1	- ML : clustering, boosting, XGB - Recession based project discussion : macro-economy concepts, objective of project and the impact of the project	- ML: clustering, boosting, XGB - statistics : inference - Weibull distribution alysis		45 minutes	Work experience/Past Education, Projects done during PGDBA, Question based on CV	- Stock market project discussion: distributions, optimizations, outcome - Covid-19 impact on the project		-Regression and timeseries: IIT Kharagpur's regression course slides -other ML aspects: Introduction to Statistical Learning -Revise all PGDBA courses

Ebay - Alyst

EXL

Games 24*7 - Data Scientist

Ebay - Alyst	2	Home Credit Default Risk (Classification): Most important Features for Prediction, Techniques for Feature Elimition, Handling Class Imbalance (SMOTE)	Hypothesis Testing: Various Kinds of Errors, Confusion Matrix, NLP: Stemming & Lemmatization (Applications & Use Cases), Basics of Regression & Time Series Alysis	60 mins	Work experience/Past Education, Projects done during PGDBA, Past Projects, Case study, Subjects studied at ISI, Subjects studied at IIT, Questions pertaining to the company/Industry or role offered by the company, Question based on CV	The Interview mainly revolved around 2 Things: "Talent Acquisition Platform Project" from the Work Experience & "Home Credit Default Risk" Project from the PGDBA Projects.	Majority of the Questions were centric to Interest & Suitability of Working with the Human Capital Related Data, since it is a rather niche domain	Statistical Inference: W.W. Hines & Montgomery, ML: Andrew Ng's Course in Machine Learning, CNNs & RNNs: Material Covered in IIT-KGP, Big Data Magement & Recommendation Systems: Mining for the Massive Data Sets, Time Series Alysis: https://otexts.com/fpp2/ Others: ISLR		
	1	1. Pgdba project related questions were asked, how can i use the findings of those projects to create money 2. Data imputation strategies were asked and their drawbacks, then a random dataset was provided and the most logical way to fill the missing values was asked		60 mins	Projects done during PGDBA, Past Projects, Subjects studied at ISI, Subjects studied at IIM, Subjects studied at IIT			Be thorough with the projects mentioned in the resume. You should have knowledge of each and every technical word mentioned in the cv. For technical part, ISLR is the key preparation source. Also solving previous year interview sets definitely help.		
	2	Resume based questions - Recommender System - Design a recommender system for any stock market trading app	Regression - Multicollinearity, Variance - definition and interpretation, Imputing the missing values Time Series - How to modify time series model due to sudden onset of covid Different types of seasonalities in time series Regression vs decision tree - when to use which algorithm?	45 minutes	Projects done during PGDBA, Case study, Guesstimates, Puzzles, Subjects studied at ISI, Subjects studied at IIT, Question based on CV	Interview began with resume based questions, moved to basics of regression and statistics and ended with puzzle	No HR round was taken	Be thorough with regression, if you mention any words related to fincbe be extremely thorough with those, you should prepare to explain your resume in 2 ways, one to an expert in machine learning and other to explain it to a layman whose primary area of expertise is magerial and not technical		
	1	Shaw- Case based NLP, Questions on Regression and It's drawbacks, metrics used etc explain classification project in depth by each point	What are the techniques in Unsupervised learning etc and use cases	45mins	Projects done during PGDBA, Past Projects, Case study, Subjects studied at ISI, Subjects studied at IIT, General Awareness, Question based on CV	Panel contains 3 members two seniors alysts and director, started with tell me about yourself then started with case based Questions on nlp imagine you are a CEO of a Google competitor how would you leverage huge data you have on NLP use cases etc and then started about how would you build end to end use cases on it etc then other member started asking about the questions on Regression and limitations in detail and other panel members on classification project in detail ,How Would split of random forest take place etc how it is different from xgboost etc metrics Why F1score why not accuracy etc and questions on False positive and true positive, recall precision etc refer to ISLR Ebay had given us an alytics (NLP) case study and we had to submit a 2 slide ppt for it. Shortlisting was based on this only.		Make sure you are good at all the basic algorithm and use cases and hands on experience with the same. Resume short list is mostly based on CG and profile i feel. Discuss case based questions with group of Peers who would bring different perspective. Projects play key role sometimes which would be base to generate questions that can be important .		
	0				30 mins	Work experience/Past Education, Case study, Subjects studied at IIT	In the Interview of around 30 minutes, 15 minutes were focused on my solution of case study only. Apart from particular questions on approach, metrics, sampling and results general knowledge of NLP (various pre processing steps) and Topic Modelling (including parameter like Coherence) was helpful. Then they gave me a case study to determine fraud sellers in terms of false listing location	Tell me about yourself.	Cv - Get it reviewed by as many seniors as possible Interviews - Spend time judiciously for preparing technical things, guesstimates, case studies, reading about companies and their business models and lastly about HR questions.	
EXL	1	2.1 Questions asked/skills tested in Technical Rounds? (Before Fil Interview) Questions from project: - Difference between SMOTE vs ADASYN - How you decide to move from Linear to Non-linear regression approach? - K-means clustering vs KNN - Advantages of backward elimition over forward - What is Stationirity in time series data? Why does it require? - What will happen if we don't remove heteroscedastic ture? ARCH vs GARCH model? No questions asked about competitions	2.2 Questions asked/skills tested in Technical Rounds? (Before Fil Interview) Most important course you have studied in PGDBA & Why ? Follow up questions on sampling tests as I mentioned Inference. Interviewer knew well about statistics.	2.3 Questions asked/skills tested in Technical Rounds? (Before Fil Interview) More time spent on work-ex as compared to projects - How did you handle impact of covid on models, initiatives taken while opening up hotels, what better could have done based on PGDBA learnings? (based on OYO's experience) - What alytics Airtel should build and what are the challenges in it from data that they collect for better customer segmentation? - Role of TRAI in India	3.1 Duration of Fil Interview 30 mins	3.2 Areas covered in the Fil Interview? Work experience/Past Education, Projects done during PGDBA, Past Projects, Case study, Puzzles, Subjects studied at IIM, General Awareness	3.3 Fil Interview Experience. Open ended case study- You have to design marketing campaign about new product at Airtel. How you design ?What would you prefer- SMS/Email/Hoardings etc? What metrics to track afterwards for conversions? How should we do customer segmentations? Where can we get data about target customers?	4 HR Questions asked.	5 Helpful Preparation strategy, material, topics etc 1) ISLR- Do 2/3 revisions. Focus on 2/3/6th chapter. For ISLR Notes- https://www.bijenpatel.com/tag/guide/ 2) Having relevant worox help me in getting shortlist in almost all visiting companies. So add keywords as Python/SQL/Dashboarding. even if you've done miniscule work in it. Easier way out is to learn Excel Formula/dashboarding/pivoting/automation 3) Prepare case studies & guesstimates in a group of 4/5 (though interviewer don't ask you typical MBA cases following structure but this activity will structure down approach). Help in tackling actual interview stress. 4) Make habit of choosing right, apt, short and crisp communication. Interview is just a healthy conversation- just don't be silent if you don't know answer nor keep blabbering if they ask question from your fav area.	
	1	Asked me to explain one of the project. I explained NLP project not much question.	In technical round I was asked about basic questions on Python - like pandas, joins , dataframe. I was also asked about different regression technique. PCA, etc		20 min	Work experience/Past Education, Projects done during PGDBA, Past Projects, Case study, Guesstimates, Puzzles, Subjects studied at ISI, Subjects studied at IIM, Subjects studied at IIT	I was asked about random forest, bagging and boosting and its application. A case was given to me. It was about how to create a email campaign for new customers for a bank for its credit card business. To answer it I have used segmentation/ clustering, past data and general other techniques. Key Idea was to answer it in a well structured manner.		Firstly I would say create a best resume it will help in shortlisting. I was shortlisted in all the companies that visited our time because of my excellent cv. Second thing is preparing about case study.I haven't prepared case study much and only focused on ML but hardly anyone asked ML during interview so my advice based on my persol experience is have a basic understanding of ml concept and prepare well for case study.	
	1	Nothing	What does enumerate command in python, lists, diclories, pandas and case study question on whom to send the emails for subscription. How left, inner joins work in sql	Nothing	15 mins	Case study, Questions pertaining to the company/industry or role offered by the companrv	Case study on bank email subscription, expectations for the role.		ISLR, Puzzles, Guesstimates are the common things suggested by everyone but one important thing, many of us tend to neglect is Case studies. Your 60% of the interview revolves around case study discussions, so practice them as much as you can. Take a few data science case studies which solves real business problems & discuss them in your groups and try to have a standard framework in mind which can be used in the interviews	
	1	Asked me to explain my worex & one of the academic projects	Basic SQL questions & Python code + 1 Puzzle		20 mins	Work experience/Past Education, Case study, Questions pertaining to the company/industry or role offered by the company	Case study on campaign roll out plan to new customers. Idea was to test our problem solving skills using ML techniques. more discussion on clustering techniques based on my approach		1. You started your journey as a chemical engineer. Then you were already working as a data scientist before joining this course. What prompted you to join PGDBA? Why do you want to join Playgames? Money or Passion? 3. If you will have to rank all these three semesters at PGDBA, how will you rank them? 4. You might have to read research papers and build things on your own. Would you be interested in doing those things? 5. Do you have any questions?	
	1	A case study was provided few days before the interview. We had to solve Most of the questions in the first round revolved around that. They tried to find the flaw in my solution. I had to defend that somehow. 1. Described what type of data I will collect 2. All the crucial steps that will be involved 3. How will you monitor the performance of your model? 4. How will you deploy them	Explained them in short and focussed mainly on some challenging stuffs - how high dimensionality affects clustering algorithms based on distance metrics, also described how did I do feature selection for unsupervised learning. Try to explain few specific challenging things in your project which you handled non trivially. Used k-means initially but it can converge to local optima if not initialized properly, so I used kmeans++. Since we were not sure of the number of cluster, so tried using DBSCAN, but it performed poorly on the dataset and I was not able to find the right parameters of DBSCAN, so almost all the customers were tagged as noise. Then I tried GMM and explained few benefits of using GMM (soft clustering, elliptical clusters possible, takes covariance into consideration)	2. Explain customer segmentation project (work ex). (10 minutes) Explained them in short and focussed mainly on some challenging stuffs - how high dimensionality affects clustering algorithms based on distance metrics, also described how did I do feature selection for unsupervised learning. Try to explain few specific challenging things in your project which you handled non trivially. Used k-means initially but it can converge to local optima if not initialized properly, so I used kmeans++. Since we were not sure of the number of cluster, so tried using DBSCAN, but it performed poorly on the dataset and I was not able to find the right parameters of DBSCAN, so almost all the customers were tagged as noise. Then I tried GMM and explained few benefits of using GMM (soft clustering, elliptical clusters possible, takes covariance into consideration)	30 mins	Work experience/Past Education, Case study, Subjects studied at ISI, Subjects studied at IIM, Questions pertaining to the company/industry or role offered by the company, Question based on CV	This round was mostly to gauge my interest in machine learning and PlayGames, my inciltion towards learning new things on my own, and understanding the importance of business.		Go with a mindset of entertaining the interviewer. All the knowledge which you have acquired, is too much for them. Just try to talk to them the way you talk to your friends. Show genuine interest in the company, the type of work they are offering, and the domain by taking example from your past, even if not asked. Always be on your toes and answer actively. Instead of giving generic answers, keep adding experiences from the past and you can even tell them a story around an experience Youtube channels: 1. Data Science Jay 2. JBStatistics 3. Ritvik mathis 4. Data Science Alytics - ISLR Videos by authors 5. StatQuest Last Year Interview Questions Regression: Prof. Budhanda's notes, ISLR Time Series: Prof. Budhanda's notes, https://otexts.com/fpp3 Machine Learning: ISLR, Andrew Ng, ISI and IIT coursework Deep Learning: CS231n course from Stanford, Andrew Ng deeplearning.ai, IIT coursework Non-Tech: Case studies from casebooks of Harvard/IIM (A/B/C), Puzzles from geeksforgeeks and other websites, Guesstimates from casebooks and online websites	
Games 24*7 - Data Scientist	1	2.1 Questions asked/skills tested in Technical Rounds? (Before Fil Interview) Written Test: They give the 1 actual project/problem/ U have to solve any 1 out of 2 or 3 cases) they are solving as a case to give your approach to solve.(end to end). Starting from types of features U would pick till deployment. Plus some very simple conceptual questions: one sentence/short answer type	2.2 Questions asked/skills tested in Technical Rounds? (Before Fil Interview) very simple conceptual questions(taught at ISI and IIT)	2.3 Questions asked/skills tested in Technical Rounds? (Before Fil Interview) (I am a Chemical Engineer)	3.1 Duration of Fil Interview 25 mins	3.2 Areas covered in the Fil Interview? Subjects studied at ISI, Subjects studied at IIT, General Awareness, Case study done by you during written test. They will give few recommendations on a fly. U have to think and then improve/cross-talk as per your understanding)	3.3 Fil Interview Experience. Picked 2 random projects and kept on building questions on top of that, discussion revolved around loss functions, why this approach was used and the description of the ML algorithms used, a little bit of discussion on what could be done better in some projects	4 HR Questions asked.	5 Helpful Preparation strategy, material, topics etc Resume: Just don't boast to the extent you can't handle during interview, Revise it as much as possible, keep it somewhat simple so that even HR can understand your story of every project on your CV(Remember at the end of the day, HR is going to shortlist ☹️) GD, puzzle, Guesstimate: Kar logo year. 1-2 hrs per day de de during IIM sem. Make a group and then start preparing. And pls, FOMO mat le who have never done these. These seems very esoteric but actually it gets very interesting as you practice more and more.(15-20 days practice is sufficient) Project: For every project on your CV, make a story in your mind with few important results/ observations you had made. I mean, if someone asks you to explain Project ABC, your next sound must not be Ahhh/Huuhh/Dkayy/Hmmm/you know..... Start with Why this project, Then results, then Data used(n brief), then observation/challenge_faced which was interesting, then how you achieved the above-mentioned results. Stats -> Amitava Sir's notes, notes from batchmates, ISLR ML -> Hands on So-kit learn book, FADML slides and Pabitra sir's lecture recording Basic DL -> Lecture Slides, Andrew NG course, Sentdex's videos Specific topics -> Yannic's videos on research paper reviews, Jay Alama's Blogs, Standford NP P Fernn	
	1	Cosine Metric for NLP PCA Bi directiol Vs Uni directiol LSTMs pro and cons with examples	Basic Stats, RF, describe the algorithms for DT, design a DT model from scratch in core python without using any library (discussion only was not asked to code), approach on parallel tree growth, Embedding spaces (ELMO and BERT), general programing questions like Big O etc.		round-1 40 minutes, round-2 40 minutes, round-3 was just a formality	Projects done during PGDBA, Subjects studied at ISI, Subjects studied at IIT, ML/AI related questions not taught in the course, General Awareness, Questions pertaining to the company/industry or role offered by the company, Question based on CV		Why innovacer, why this role? why venture into ML AI		
	2	1. What are the methods to handle class imbalance? 2. How does SMOTE work? 3. What's CNN and RNN? Describe how they work. 4. What's BERT? Describe 5. What is Chi square test?	1. You're given some features pertaining to medical records of many patients and your target variable is a particular numerical value. How will you proceed (describe the steps) with it? 2. What is class? 3. Basic questions from pandas and numpy eg, how do you join dataframes etc. 4. Can you give an example of a case where the number of tuples resulting from an inner join of two tables is greater than the number of tuples in each of the origil tables? Is it possible? 5. Suppose you have to predict the number of rose flowers going to be sold today in Calcutta's market. How are you going to do it? Which features will you require? Which algorithm will you follow? 6. What's Z-score and what's the concept of level of significance and confidence intervals? Describe with an example.	Why did you change track to pursue data science? Convince us.	10-15 min (HR interview)	Work experience/Past Education, Projects done during PGDBA, Past Projects, Case study, Guesstimates, Subjects studied at ISI, Subjects studied at IIT, Question based on CV	Easy interview. I was asked to describe my persolity and behavioral traits. How many fast friends i have etc. Why I didn't pursue placements from previous college and directly joined data alytics course.		Prepare well whatever is written in your CV. Have proper answers to whatever important decisions you have taken in life in the past.	
		1 Technical rounds before Fil Interview	2.1 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.2 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.3 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	3.1 Duration of Fil Interview	3.2 Areas covered in the Fil Interview?	3.3 Fil Interview Experience.	4 HR Questions asked.	5 Helpful Preparation strategy, material, topics etc

Innovaccer	2	(W.r.t a biny classification project of mine) What classification algorithms did you apply on the data? Which one performed best? A few follow up questions on imbalanced classes, AUC and threshold tuning.	1. Create a linear regression model pipeline from end to end (I was asked to share my screen, and show the virtual workflow on MS Word, explaining each step). I was also asked to write the pseudocode to create a python class for the same (something similar to AutoML) 2. Differentiate between Bagging and Boosting 3. Discussion on bias-variance trade-off in tree-based algorithms 4. Brief discussion on Adaboost, Gradboost, regularization terms in Xgboost and the need for regularization. 5. Overfitting in tree-based algorithms – factors related to overfitting in tree-based algorithms? 6. Brief discussion on the need and the idea behind tree pruning. 7. Differentiate between a tuple and a list 8. What is the advantage of Pandas library w.r.t vectorised operations? 9. A fairly straightforward problem in SQL (Given a table D1 having attributes Emp_ID, Dept_ID, salary, write a query to select maximum salaries for each department) 10. For the same table, select the Emp_ID for which the maximum salary occurs as well (I wasn't able to write the code on the spot, but I told the interviewer it could be done using nested queries) 11. Was asked a fairly straightforward coding problem (given a list of words, select only the words smaller than 5 letters using list comprehension in python)	Mostly Python, SQL and ML Theory based questions were asked in my PI.	3 rounds of PI were held (2 technical + 1 HR). Each round went for about 30 minutes each.	Work experience/Past Education, Projects done during PGDBA, Subjects studied at ISI, Subjects studied at IIT, SQL + Python coding based questions	1. Brief Introduction (2-3 mins) 2. How much programming exposure have you got since joining PGDBA? 3. My motivation for joining PGDBA was checked 4. I was questioned on what made me switch from Sales & Marketing to Alytics	What are your qualities, and (given my non-tech background) why should we hire you for this tech-heavy role?	1. Past interview experiences, give more importance to most recent years' PI experiences 2. Form small study prep groups of 3-5 people. This should greatly accelerate the revision and preparation during the fil 1 month before interviews 3. If you are targeting companies in which coding based questions may be asked, then competing in as many hackathons and alytics competitions in which python coding is involved will greatly help during interviews.		
	1	Very basic common sense alytics questions like how to deal with missing data, how to decide which features are important etc. The focus was less on technical knowledge and more on business/common sense understanding of the situation. No project based questions were asked in the first interview.	Check above	Many questions directly/indirectly related to workex. The first interview was a mix of alytics, business sense and HR related questions. Someone having operations & supply chain experience might relate with the questions better.	20 mins	Work experience/Past Education, Projects done during PGDBA, Subjects studied at IIM, Questions pertaining to the company/industry or role offered by the company	The fil round was conducted solely for testing your business understanding. They try to ask questions which help test your possible fit in the firm and your competence as a mager/strategist. For example - how should the firm decide whether to pursue a project or not? Explain one adverse situation you experienced during your job period and how did you deal with it ? Suppose your seniors at the firm are not in agreement with you regarding a particular action, how would you convince them ? Have you faced such a situation before? All the questions were more or less on similar lines. Even for project related questions, they are more interested in your business understanding than technical understanding.	HR question was asked in the first round - are you ready to relocate anywhere? Why not continue in the government sector rather than pursuing PGDBA.	Covering ISLR thoroughly will be sufficient for dealing with any technical question, because the technical questions asked are pretty basic and situation based. Cover the 'strategic magement', 'HRM' and 'Corporate Fince' course in IIM Calcutta very thoroughly as it can help you answer some otherwise complicated seeming questions, especially strategic magement. If your strategic magement teacher is someone other than Biswatosh Saha, try to consult your seniors to understand what he taught.		
	1	Advantage of using LSTM and Prophet, Explain the methodology followed in customer attrition prediction competition.	Timeseries :- a business case study based on timeseries for predicting biscuit sales (what all features can be used), drawback of using linear regression in timeseries forecasting. ARCH and GARCH models, ARIMA, SARIMA and ARIMAX, how to handle multiple exogenous variables in ARIMAX.	No questions were asked	30 mins	Case study, Guestimates, Subjects studied at IIM, General Awareness, Questions pertaining to the company/industry or role offered by the company	Fil interview was to check if the candidate is apt for the role. So the questions were more from the business side than the technical side. Multiple short case studies related to sales and timeseries were asked, guestimate questions related to sales, general awareness questions like what is FMCG, how to classify a product as FMCG or non-FMCG etc..		Prepare your resume. Make sure you study each and every point mentioned in your resume. Choose your projects wisely, make sure your projects are diverse and cover all the important topics and have a valid business use case. ISLR, Towards Data Science, Andrew Ng lectures for technical preparation. Prepare for cases studies and guestimates from B-school casebooks and guestimate materials and practice these questions with your friends also.		
ITC- Marketing Alytics ITC Data Science	1	1 Technical rounds before Fil interview	2.1 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.2 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.3 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	3.1 Duration of Fil Interview	3.2 Areas covered in the Fil Interview?	3.3 Fil Interview Experience.	4 HR Questions asked.	5 Helpful Preparation strategy, material, topics etc	
	1			1. How would you explain SARIMA to a business leader. 2. Explain ACF and PACF. 3. Churning rate case study on a data science solution to be applied at a clothing firm	Explain a project at prior work ex	20 mins	Work experience/Past Education, Projects done during PGDBA, Past Projects, General Awareness, Questions pertaining to the company/industry or role offered by the company, Question based on CV		Why Kearney, Why Consulting	Coursework	
	1		Brief about competition, projects and cross questioning	- How do you predict covid cases for next month? - How to decide the locations to setup outlets for a FMCG company? - SQL queries on how to get top salaried employees in various departments of a company etc.	Brief about my work-ex and various challenges faced	15-20 mins	Work experience/Past Education, Projects done during PGDBA, Case study, Question based on CV	- Alytics case study - Dashboard experience and what kind of charts to use for given situations - Few questions on SQL, python (psuedo code or approach)	How can you assure that you are open to learning new tools?	Be familiar with SQL, Python and any dashboard tool. Communication is the key in consulting. Be thorough with your intro and brief about any project/competition. Be well versed with your CV. Do frame your projects such that there is a business problem you are trying to solve and explain it in the same way. Practice alytics specific case studies	
Kearney - Data Science	2	1 Technical rounds before Fil interview	2.1 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.2 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.3 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	3.1 Duration of Fil Interview	3.2 Areas covered in the Fil Interview?	3.3 Fil Interview Experience.	4 HR Questions asked.	5 Helpful Preparation strategy, material, topics etc	
			Picked two projects of mine and asked in detail about the concepts involved and d metrics used and why they have used why can't other metrics used to evaluate the performance etc.	Case based Questions(Market Entry in Other country, Parameters to consider and how to related to data science etc) and Questions based on Supervised learning Techniques, Time series, NLP and SQL. To be specific differences btw normal classification techniques and ensemble methods etc.	How can we use data science techniques in prior roles ? What can be different use cases etc	30- 40 mins	Work experience/Past Education, Projects done during PGDBA, Past Projects, Subjects studied at ISI, Subjects studied at IIT, ML/AI related questions not taught in the course, General Awareness, Question based on CV	Two people were present (Director and Alytics India Head) Director Started Introduction and then with NLP based Questions, how would I utilized and implement models learnt in sentiment alysis then Head asked about my time series project in detail and how I would explain it to a person who is not aware of any of these techniques etc and then asked about my knowledge at SQL and basic visualisation tools etc. Asked about why do you prefer us? How do you see yourself in coming few years ? Why not a startup ? My certification from Nvidia Deep learning Institute on Transformers based NLP techniques etc and then switched back to HR questions	Tell me about yourself? where do you see yourself in coming years ? why us ? How would I add value to the role ?	Make a habit of reading ISLR as much as you can, explore data science blogs and be updated with new innovations which would help in relating your answers to current trends. Resume should include all aspects of your profile it shouldn't be too academic oriented or too extra curricular or work ex oriented. Projects must cover basic to advance techniques including visualisation and sql based, focus more on basic techniques which everyone in the panel would be aware of. Be collaborative and work with as many peers as possible freshers experienced etc each one of you would bring great perspective which would help you at the end. Teach others while you learn and try to go through notebooks at kaggle. Make sure to have hands on experience with all algorithms supervised and unsupervised, Basic understanding of NLP and Time series would be of great help	
	1		1. I had done a project on Covid data, so they asked what KM curve is and how can I use it in insurance and banking industry 2. How to forecast future number of Covid cases	SQL related questions on query joining, optimisation		30 mins	Work experience/Past Education, Projects done during PGDBA, Case study, Subjects studied at ISI, Subjects studied at IIM, Subjects studied at IIT, Questions pertaining to the company/industry or role offered by the company, Question based on CV	I was drilled on my past work experience and they repeatedly gave me different client scerios and checked how I would behave in that situation		Prepare your introduction and Why you want to join this company very well. Be prepared to explain about any project/competition that is mentioned in your resume. Most of the questions in your interviews (for all companies) will revolve around the projects and techniques that you have mentioned in your resume. Other important topics for interview and online tests - ISI - SQL, Basics of statistics IIT - All ML techniques (particularly those mentioned in your resume) and metrics Material: ML - StatQuest (I preferred watching videos) or ISLR (videos for ISLR are available on edx and YouTube) Stats - Business Alytics by U Dinesh Kumar (Can go through if time permits, Not must though)	
	0		Project - Customer Segmentation What can be done using the segments of customers that we find using this project?			15 - 20 minutes	Projects done during PGDBA, Guestimates, Subjects studied at IIT, Questions pertaining to the company/industry or role offered by the company, Question based on CV	There was a case study competition prior to the interview. The case study was about Customer segmentation and targeting for an online travel agency post COVID-19. There was only one round of interview. No separate technical and HR round.	Already mentioned above		
	0		Presentation on Tourism Industry				15 mins	Work experience/Past Education, Guestimates, Puzzles	1. One puzzle and one guestimate 2. How can you determine Citi Bank performance on quarterly basis? What metrics to be used? Elaborate.		Puzzles, guestimates and work-ex knowledge
	p	1 Technical rounds before Fil interview	2.1 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.2 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.3 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	3.1 Duration of Fil Interview	3.2 Areas covered in the Fil Interview?	3.3 Fil Interview Experience.	4 HR Questions asked.	5 Helpful Preparation strategy, material, topics etc	
			My interview was taken by Maths and CSE panel; Questions revolved around my projects (Basic working, why and how questions only), 2 coding questions were given on Matrices and one basic array problem, SqI query was also asked for finding the second largest salary from a database of employees. 1 case study was also given on time series data.	All the questions in machine learning were around the project only. If you have read ISLR and know your projects well then you will surely succeed.	No such questions were asked.	45 mins	Projects done during PGDBA, Past Projects, Case study, Subjects studied at ISI, Subjects studied at IIT	Fil interview was completely around project. I was asked to pick up my favourite project and for 30 mins there was intense discussion on the kind of data, why this technique, what other alternatives can be there; He was basically trying to link it with the kind of work that happens in Mastercard. In the end was some general discussion only.	Why mastercard? Do check their 4P model. I was also whether i knew about the latest mastercard rbi dispute and what I know about it.	For Mastercard AI a good understanding of ML concepts is a must (ISLR will be really helpful). Knowledge of your project and some coding as well (if programming background). For coding the leetcode easy and medium questions around arrays and lists will be the best. For SQL hackerrank will be a good source to learn.	
	0					40 mins	Projects done during PGDBA, Guestimates, Subjects studied at IIT, Questions pertaining to the company/industry or role offered by the company, Question based on CV	0) Introduce yourself 1) Explain Time series project (as it was my 1st academic project mentioned in my CV) 2) Questions on univariate and Multivariate time series alysis 2a) Why did you use univariate alysis? 2b) Which model will you use for multivariate alysis? 3) What is ADF test? 4) What is stationarity? 5) What is LSTM? 6) Which is better SARIMA or LSTM? 7) What is Actuary? + (some random discussion) 8) Guesstimate: Market size of Insurance industry post pandemic (covid-19). (In between questions on assumptions) 9) Discussion on Hoeffding (CV Functions: 10-15mins)	10) Why mastercard? 11) Choose Mastercard AI garage or Mastercard Data and Services	- Full CV - ISLR (Read 2-3 times) - Business Alytics by U Dinesh - Time series concepts and project (Checkout DATACAMP) - MLR concepts and project - Puzzles (Geekforgeeks) - Guesstimates (Harvard, IIM A, IIM C) - Extracurriculars (If you have <1 yr of workex)	
	1					25 mins	Projects done during PGDBA, Case study, ML/AI related questions not taught in the course, Questions pertaining to the company/industry or role offered by the company, Question based on CV	- General Introduction - Case Study question about the approach, its relevance and some details like basic questions on data manipulation, removal of outliers and their logic.		Prepare to to defend your CV well, prepare basic SQL queries to handle data	
	0		Asked to elaborate on my favorite project	Some questions related to the technologies, tools and algorithms that was mentioned in my CV	Questions related to my role, day to day activities, industry perspective	25 mins	Work experience/Past Education, Projects done during PGDBA, Guestimates, Puzzles, Subjects studied at IIT, Question based on CV	For me it was only one round which lasted for around 25 mins. I was asked to guess the number of peoples flying in and out of Calcutta airport. 2 puzzles were asked: prisoners & poison and the other was rickety bridge. Also there were questions on the projects which I have mentioned in my CV.		1) IIM A case book 2) Case in Point: Complete Case Interview Preparation (must for Consultancy) 3) ISLR (Must**) 4) Prepare everything from your CV 5) Prepare well your projects and 2-3 competitions 6) Practice puzzles, probability problems. 7) Python, SQL 8) DL / Big data 9) Time series & Regression for D. F. Shaw Books 1)Business Analytics by U Dinesh Kumar (Very readable and useful for revision) 2)ISLR Topics: Everything related to the projects on your resume; Basic topics like regression, decision trees, imbalanced data etc. Keep the couple of projects you are most confident about at the top and be prepared to explain it very clearly. I followed the following order which was perfect for me 1. CV (Each points & line in detail) 2. ISLR Book 3. IIT Sem 4. ISI Sem 5. IIM Sem 6. Mock drills with friends	
	0		1) Basic ML questions 2) TF-IDF, Word cloud, LDA from project	1) Basic ML questions only			15 mins	Projects done during PGDBA, Guestimates, Puzzles	1) Guesstimate: Total number of smart phone in india 2) Case study on cyber security	1) Why Mastercard? 2) What type of work you want to do here?	
	1			A case study was given to us, where we had to propose an end to end data driven solution for an online travel agent and make a 5 minute video presentation on it.			15-20 mins	Work experience/Past Education, Projects done during PGDBA, Guestimates, Puzzles, General Awareness, Question based on CV	Tell me about yourself. Briefly explain one of your projects. A guesstimate for calculating the number of passengers in an airport in a day. A puzzle question was also asked.	Why Mastercard?	I read ISLR. It is very useful. I prepared for each technical term that I wrote in the projects. For Deep Learning, I revised class slides. Basics are important. Subjects from ISI and IIT should be thoroughly revised. Make sure you are on par with coding if you are looking for tech heavy roles.
	1		1. Why have you chosen the f1-score as evaluation metrics ? 2. Details about the dataset of one my projects (Bank Marketing data for term deposit)		1. Explain gaussian mixture models. 2. Difference between sigmoid and tanh activation function. Where do you use what? Which has better gradient flow and what is the reason? 3. What is Probability density function, Normal distribution?	I was asked about the reason for changing the field and pursuing Business analytics course.	20 mins	Projects done during PGDBA, Subjects studied at IIT, Questions pertaining to the company/industry or role offered by the company, Question based on CV	1. I was asked to explain my regression project. I explained it covering various aspects from A to Z. 2. What is RMSLE? Why did you use RMSLE in your project? What is the difference between RMSLE and RMSE? Where do you use what? What are benefits of each? 3. What is the difference between AR and MA?		
	1		If a point belongs to multiple clusters with equal membership in a K-Means clustering, how will you decide which cluster to assign it to?	Explain Different Joins in SQL and I was given a question to solve.			15 mins	Projects done during PGDBA, Puzzles, Subjects studied at ISI, ML/AI related questions not taught in the course, Question based on CV	It was a short interview with some basic technical questions that I mentioned earlier.	Introduce yourself. Why Mastercard?	

Mastercard

Mastercard	1	Completely based on resume Work ex, Projects, Algorithm used in projects	Statistics questions Knn technique How will u handle missing values	-	10 mind	Work experience/Past Education, Projects done during PGDBA, Question based on CV	It is completely based on resume. Questions were from projects and the approach used in the project.	Why do you prefer this company ?	Focus on resume more, I didnt do my resume preparation well and got only few shortlist. And for interview have answers for each and every line of your resume.
	0	Basic SQL, python	How will you build a databases from scratch for a loan issuer	-	20 mins	Projects done during PGDBA, Guestimates, Subjects studied at ISI, Subjects studied at IIT, Questions pertaining to the company/industry or role offered by the company			ISLR, slides of subjects, YouTube channels.
	0				15 mins	Work experience/Past Education, Projects done during PGDBA, Puzzles, Subjects studied at ISI, Subjects studied at IIT, Questions pertaining to the company/industry or role offered by the company	There was only one round (including Tech+HR) 1. Walk me through your CV 2. Basic questions on confusion matrix and classification matrices as i've listed classification based projects in my CV 3. River crossing puzzle (4 people with different weights) 4. Why MasterCard D&S	1. Why MasterCard D&S	1. Most important to make CV as simple as possible that you can thoroughly explain each and every point to the interviewers 2. Prepare ISLR thoroughly 3. Group study before 1-2 months of placements on all necessary curricular topics including guestimates and puzzles 4. Participate in as many as competitions to collect CV points (this will be differentiated sanction in your CV)
	0				20 mins	Work experience/Past Education, Projects done during PGDBA, Guestimates, Questions pertaining to the company/industry or role offered by the company, Question based on CV	1. Walk me through your CV. 2. Explain the project on NLP(I had mentioned one NLP based project in my CV) 3. No follow up questions were asked on the project. 4. Then asked to solve one guestimate - "Estimate the number of mobile phones currently used in India". 5. Why did you join PGDBA when you come from a core engineering background? 6. Why do you want to join Mastercard?		Prepare your CV projects thoroughly. ISLR should be read cover to cover.
	2	1) Questions regarding unbalanced dataset. How to handle them. What metrics to use for evaluation 2) Dimensionality reduction	1) Transformer used for language translation. Problems with dataset. How to handle large training set		30 mins	Projects done during PGDBA, Past Projects, Subjects studied at IIT, ML/AI related questions not taught in the course, Questions pertaining to the company/industry or role offered by the company	The questions were more on advanced manipulations using linear algebra and how to leverage it for building models. Comparison of different models, it's pros and cons. Focus on deep learning basics	Interest in research and strengths and weakness in general	ISLR, statquest for quick revisions, discussion with peers
	1	Guestimates - No of trees in IIM Calcutta Guestimates- No of BST buses in Mumbai	Clustering Probability Question		25 Mins	Case study, Guestimates, Puzzles, ML/AI related questions not taught in the course			
	1	Just a basic overviews of the different projects done. Question on the approach of solving Mastercard case study.	A puzzle on identifying a pattern and explain pseudo code to generate that pattern. Technical questions on unsupervised learning, clustering use cases.		40 mins	Projects done during PGDBA, Puzzles, Subjects studied at ISI, Subjects studied at IIT	Questions on explaining the detailed approach of solving case study, concepts of marketing used there involving Segmentation, targeting, positioning. Use of cluster alysis, decision on number of cluster and formation of customer persos. - Only 1 round of around 35 mins - Tell me about Yourself. - Why do you want to join Mastercard? Told how i would be able to apply everything i have learned in the course with huge data that Mastercard possesses. Secondly, Master card has been into data alytics for long and has great amount of experience which would give me great opportunity for learning from fellow mates. - Explain any one project of your CV. Explained about Recommendation System project. - What do you think about new research being done in the field of deep learning and what is your take in terms of interpretability and accuracy? I said that I read a paper on GradCAM and found that earlier research hers were focusing on building models that are highly accurate, but these days researchers know that interpretability matters a lot and they are trying to bridge the gap by developing highly accurate models with high interpretability. - Puzzle – You have 3L and 5L bucket, how will you make 4L of water from this.		Participation in Business case studies to understand problem structuring. Basic ML algorithms and their interl workings.
	1	Communication skill, awareness about alytics field on goings, basic understanding of concepts, why our organization			35-40 mins	Projects done during PGDBA, Puzzles, Subjects studied at ISI, Subjects studied at IIT, General Awareness, Questions pertaining to the company/industry or role offered by the company, Question based on CV			Prepare CB well, ISLR, do read few recent research papers, solve all the standard puzzles
	0				30 mins	Case study, Guestimates, Puzzles	1) Case study: Telecom company and it's market entry strategy (Singapore) 8-10 follow up questions 2) Case study: Health insurance company and it's growth strategy (Mumbai)		Prepare case studies & guestimates with your friends.
	0	1. Asked a Alytics case study . A Singapore based travel company's revenue is falling YOY . How do you approach and solve it ? 2. Explain any one of the project you did ? 3. Project related questions		No	15 minutes	Projects done during PGDBA, Case study, Subjects studied at IIT, Question based on CV	A alytical case study is asked . Questions on the project done during PGDBA		
0	There are just one interview which barely lasted 5 minutes. He just asked me that what i did in the pre-interview assignment (video presentation) and he was pretty impressed by that. He then just asked me one question - how does Gradboost work.	Check above	No work ex related questions	5 mins	Case study, Subjects studied at IIT	Just 2 questions (I have written them before)		The MasterCard experience varies for different people. It was extremely short and easy for me. But some folks were asked complicated questions. Covering ISLR thoroughly is a must. Also go through StatQuest videos to go through the ML algorithms in a very easy to understand manner.	
1	X-Ray Pneumonia Detection (Computer Vision): CNNs: Meaning/ Interpretation of "Convolution", Difference in MAXPOOL & AVGPOOL	RNNs: Implementation of LSTMs Clustering: 3 Main Steps of K-Means Clustering 1. Difference between correlation and covariance 2. Difference between cross entropy and cross entropy loss function 3. Working of RNN , gru and the different gates used in them 4. Recall, precision and confusion matrix based on data given 5. Different layers of CNN, and parameter calculations		20 mins	Projects done during PGDBA, Subjects studied at IIT, Question based on CV, HR Questions	Brief Overview of CNNs, RNNs & Clustering		Same as Company 1	
2	Nothing		Nothing	40 mins	Subjects studied at ISI, Subjects studied at IIT, ML/AI related questions not taught in the course	Complete technical interview covering advanced stats concepts, deep learning and machine learning			
1	1. Asked to explain me project of "Value at Risk (time series)". No follow-up questions	1. Assumptions of Linear Regression	1. Tell me about the alytics related work in your prior work experience- I explained the Descriptive Alytics related work I used to do in my work-ex. 2. Why you are the best fit to our company (Razor Group)?	15 mins	Work experience/Past Education, Projects done during PGDBA, Puzzles, Subjects studied at ISI, Subjects studied at IIT, Questions pertaining to the company/industry or role offered by the company, Question based on CV, HR Questions	There were three rounds: First HR round for 5 min - general introduction and why you are interested to work with us. Second round technical: 1. Walk me through your CV 2. Explain project of your choice (no follow up question) 3. Two puzzles (1. Three persons residing at each indices of triangle and start moving with constant speed, what is the probability that none of them coincide 2. There are 1000 wine bottles. One of the bottles contains poisoned wine. A rat dies after one hour of drinking the poisoned wine. How many minimum rats are needed to figure out which bottle contains poison in hour) 4. Assumptions of linear regression There was just one technical round		Same as earlier	
1	A brief intro followed by a question on inner joints from fundamentals of databases.	Guess estimate: Estimate the number of flights arriving and leaving a particular airport.		20 mins	Guesstimates, Subjects studied at ISI	Questions from other companies: Questions on precision and recall - real life examples Questions on Time series project How to estimate the demand of a new product without any historical data Root cause alysis on the case: Number of customers purchasing goods from e commerce app after logging in got reduced.		1. Choose your Project in such a way that it covers all most of the techniques learned during the course. Books : 1. ISI : Go through all the Topics covered in class (Class Notes). Follow the the suggested books by professors. 2. IIT : YouTube channels :Normalized nerd , stat quest , 3Blue1 Brown. 3. IIM : Pay attention to all the classes and solve the case studies	
1	A individual Case study is given Before interview based on which candidates are selected for interview. My interview mostly revolved around the case study 1. Explain me us briefly about the Case study and how did u approach it ? 2. How did you prepare your data and what logic did you use to merge all the data files ? (4 data files were given) 3. Why did you use Chi-square test and how did it helped you ? (I used it to test the dependencies among attributes and target) 4. What measure did you use to evaluate the model and why do you choose it ? 5. What Insights did you get from the EDA ? 6. Why did you use Logistic regression as Base model ?	1. How do you reduce the class imbalance ? Asked few questions on SMOTE 2. What's Bagging and boosting ? 3. How Decision tree is used for classification ? 4. Do we need to do attribute selection for tree based models and how it will select attributes ? They gave a case almost a week or more before the interview which was about classifying vehicle loans into fake and genuine types - detection of fraudulent vehicle claims. Questions were based mainly on that. 1. What do you do when there are huge numbers of correlated features in the dataset? 2. Describe how PCA works. 3. What performance metrics are useful for this particular case? 4. What's the precision, recall, and F1 score? 5. Why do you find that in some cases the accuracy of the model on isolated test set increases with the number of iterations? 6. What's the motive behind performing k fold cross validation?	They Just asked me what's your role in your previous company	20-25 minutes	Projects done during PGDBA, Case study, Subjects studied at ISI, Subjects studied at IIT, Question based on CV	1. I had one round of interview after solving Case study. Interview revolved mostly around case study and and the process i adopted to solve the case study and techniques used it . They are more interested in logic behind the techniques i used. 2. They asked questions on the project i did in IIT	1. What's your motive to Join Novartis 2. Are you comfortable to work in Hyderabad ?		
1				20 mins	Projects done during PGDBA, Case study, Subjects studied at ISI, Subjects studied at IIT				

Meesho Business Alyst	1	1 Technical rounds before Fil interview	2.1 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.2 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.3 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	3.1 Duration of Fil Interview	3.2 Areas covered in the Fil Interview?	3.3 Fil Interview Experience.	4 HR Questions asked.	5 Helpful Preparation strategy, material, topics etc
	1	Questions from the case study provided by Novartis 1. How did you handled Missing Values ? 2. How did you merged the dataset ? 3. Why have chosen tree based algorithms why not any other algorithm ? 4. What is Random Forest ? When it can be used ?	1. What is precision and Recall ? 2. Explain the cases where Precision, Recall, Both are important? 3. What is AUC and ROC. When can you rely on this ?		1. Tell me the thing which you liked most about teaching job ?	35 minutes	Work experience/Past Education, Projects done during PGDBA, Case study, Subjects studied at ISI, Subjects studied at IIT, Question based on CV, HR Questions	They were mostly checking the candidate who has sound knowledge of machine learning and can be good fit to the team. They asked questions based on case study and CV Some HR Questions which They asked are - 1. Why do you want to switch your field ? 2. Why Novartis ? 3. Do you know any person in Novartis? 4. Do have problems in relocating to Hyderabad?		1. Your CV preparation is most important 2. ISLR Book (Latest Edition) 3. IIT Sem 4. ISI Sem 5. IIM Sem 6. Mock drills on your cv

Novartis-Data Scientist	1	1 Technical rounds before Fil interview	2.1 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.2 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.3 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	3.1 Duration of Fil Interview	3.2 Areas covered in the Fil Interview?	3.3 Fil Interview Experience.	4 HR Questions asked.	5 Helpful Preparation strategy, material, topics etc
	0	They have given a case study. Entire discussion was about my approach and what could have been better.	Familyarity with some basic libraries & their parameters. Asked to explain one project as well.		Why PGDBA & alytics!!	20 minutes	Work experience/Past Education, Projects done during PGDBA, Case study, HR Questions	It was an easy one. They were mostly looking for the candidate's approach.		
	2	Regrading Machine Learning , NLP	Regrading Machine Learning , NLP		Asked related prior work ex and what I can contribute	1 hour	Work experience/Past Education, Subjects studied at ISI, Subjects studied at IIT, ML/AI related questions not taught in the course	1. Technical details like NLP , ML 2 . Background 3 . Project discussion for future	Motivation to join PGDBA	Prepapare your CV and projects . Read carefully whatever you write on CV
	2	1)Explain Clustering(based on project I had done) 2)Time Series based question-ARIMA(project related)	1)About SQL inner join and outer joins 2)Difference between supervised and unsupervised learning		1)Asked me to explain my job role in previous organization 2)Give a brief introduction about yourself	20 mins	Guesstimates, Puzzles, Subjects studied at ISI, Subjects studied at IIT, General Awareness	They asked about cost estimation .How to modify the confusion matrix to account for assymetric costs in evaluating classification model?	A guestimate was asked based on how profitable it is to bring a zebra to a zoo. I had done an elaborate cost -benefit alysis. The interviewer liked my approach.	Just be confident. Brush up on fundamentals taught at ISI/IIT. Go with an open mind. Anything can come up in an interview. Just keep calm and focus on the approach
2	NLP Project Classification methodology in ML	Case study NLP ML model training in production				35 minutes	Projects done during PGDBA, Case study, Subjects studied at IIT, ML/AI related questions not taught in the course, Question based on CV	Project based question: Use of NLP technique in the project, use of different type of encodings like count vectorizer, TF IDF and BERT embeddings. Steps of preprocessing of textual data. Understanding of BERT training datasets.	What areas of alytics would you be interested to work in?	Mainly CV project should be prepared thoroughly along with case study Understanding common frameworks like profitability, market entry etc.

Piramal	1	1 Technical rounds before Fil interview	2.1 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.2 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.3 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	3.1 Duration of Fil Interview	3.2 Areas covered in the Fil Interview?	3.3 Fil Interview Experience.	4 HR Questions asked.	5 Helpful Preparation strategy, material, topics etc
	0					30-35 minutes	Projects done during PGDBA, Case study, Guestimates, Question based on CV	Questions were based only on the projects mentioned in my resume. 1 Case study and 1 Guess estimate was also given to solve.		Know your resume inside out and be fluent in your communication.

	1	1 Technical rounds before Fil interview	2.1 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.2 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.3 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	3.1 Duration of Fil Interview	3.2 Areas covered in the Fil Interview?	3.3 Fil Interview Experience.	4 HR Questions asked.	5 Helpful Preparation strategy, material, topics etc
	1	Case study: Started with a brief introduction. I was given a case where distributors attrition is increasing even if the retail demand is high. I had to think in an overall perspective in terms of supply chain, profit margins etc. The question is open ended and can be approached from different ways. The questions were directed to assess the Problem solving ability and spontaneity.	Guess Estimate: Estimate the number of hand sanitizers sold in my home town for a particular day during the peak covid months of 2019			10 minutes	General Awareness, Questions pertaining to the company/industry or role offered by the company	Fil interview was basically conducted to assess the cultural fit of the candidate to the company. The interview went in the form of general conversation.	Try to cover ISLR, also focus on repetitive questions like precision and recall. Try understanding the background math of machine learning algorithms. Prepare for guess estimates and case studies.	For resume shortlisting: Ensure the projects in your resume covers the topics which the interviewer is looking for. You can get the list of general topics by interacting with anyone from your previous batch. A well prepared Intro is must.
	0	Nothing technical.				12 mins	Work experience/Past Education, Puzzles, General Awareness, Questions pertaining to the company/industry or role offered by the company, HR Questions	Nothing as such, since I was already a consultant, they asked me about consulting 101. How is the market in general and all. It was not even an interview, more of a conversation. Around 7-8 mins the interviewer told that they will be selecting me. I think it was pre-decided.	Brush up conversation skills, practice puzzles from brilliant.org if possible.	

PwC	1	1) Introduce yourself 2) Explain Image segmentation project and idea behind using models etc.	1) Probability question		30 mins	Projects done during PGDBA, Puzzles, ML/AI related questions not taught in the course, Questions pertaining to the company/industry or role offered by the company, Question based on CV, HR Questions	Round 1 (HR) 1) Introduce yourself 2) Questions on extra curriculars and volunteering experience Round 2 (Technical) 1) Introduce yourself 2) Explain image segmentation project and models 3) Probability question Round 3 (Founder) 1) Introduce yourself 2) Explain Recommendation system project 3) Some random discussion Questions were based on ML and Deep Learning 1. Tell the code to concat two tables on particular variable? 2. When to use VIF? What should be the optimum VIF and why? What are altertes to VIF? 3. Difference between Tree Model and Regression model? 4. Do we need to use VIF for Tree Based Model? 5. If using PCR for Tree Models what are the merits and demerits? 6. How will you handle 5,000,000 data with 50,000 variables? Which model should we use and why? 7. Different types of neural network models? 8. What is transfer learning and how to use it? How did you use one in your project? 9. What is batch normalization and dropout? When to use them? 10. Different types of optimizers? What makes them different? 11. Which optimiser did you use in your project? Why not the others? 12. Are you well versed with tensorflow? What about pytorch? 13. Questions on NLP project? Brief on BERT & Universal Sentence Encoder? 14. What is stacking generalization? How to use it with neural networks?		- Full CV - ISLR (Read 2-3 times) - Business Alytics by U Dinesh - Time series concepts and project (Checkout DATACAMP) - MLR concepts and project - Puzzles (Geekforgeeks) - Guessestimates (Harvard, IIM A, IIM C) - Extracurriculars (If you have <1 yr of workex)
	1		Coding test - Time(45 min) 1. Merge two tables on particular variables, complete missing values, use vif 2. Create bivariate charts 3. Build random forest model with hyperparameter tuning		40 mins	Work experience/Past Education, Projects done during PGDBA, ML/AI related questions not taught in the course, Questions pertaining to the company/industry or role offered by the company, Question based on CV			1. ESL 2. Deep Learning (MIT) 3. Alysis of Time Series 4. Alysis of Variance, Design and Regression
	1	Mostly based on projects and competition.	Questions related to CNN and time series	Questions based on resume linking past work ex situation and alytics techniques	10 mins	Work experience/Past Education, Projects done during PGDBA, Subjects studied at ISI, Subjects studied at IIT, Question based on CV	Questions on CNN explaining in detail how it works Questions based on Projects with explation of technical terms like Sharpe Ratio(project specific), Sentiment alysis. Questions regarding his presentation during pre placement talk		Be attentive during pre placement topic about projects specified. Be thorough with the projects you have worked on ISLR book Case Studies Puzzles are important for some companies
Razor Group- Data Scientist	1	2.1 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.2 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.3 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	3.1 Duration of Fil Interview	3.2 Areas covered in the Fil Interview?	3.3 Fil Interview Experience.	4 HR Questions asked.	5 Helpful Preparation strategy, material, topics etc
	1	Basic understanding of concepts, communication skill, project understanding			12-15 min	Work experience/Past Education, Projects done during PGDBA, Past Projects, Subjects studied at ISI, Subjects studied at IIT, Question based on CV	- There was just one round in which they mainly asked me how, why and what of one of the projects i mentioned in the CV. - Only 1 round of around 10 mins - Explain any business problem that you were tackling under your projects done at Capgemini. How did you go about it? - Explained about ETL process in relation to transactiol data of banks. Mentioned about tools and language used. - Explain all the data pre-processing which you did for one of your academic projects.		Prepare your CV well, ISLR is must
Scieptic AI - Data Scientist	0	2.1 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.2 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.3 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	3.1 Duration of Fil Interview	3.2 Areas covered in the Fil Interview?	3.3 Fil Interview Experience.	4 HR Questions asked.	5 Helpful Preparation strategy, material, topics etc
	0	What is Ridge & Lasso Regression and when is it used? What does regularization do?			20 mins	Projects done during PGDBA, Subjects studied at ISI, Subjects studied at IIT, Question based on CV	There was only one round of interview. But the 1) Explain a situation in your previous work-ex or in your course where you solved a business problem using statistical method - I explained in detail about a project in my resume. 2) What is Ridge & Lasso regression and when is it used? (Follow-up question from the project mentioned above) 3) A question on regularization and bias-variance trade off.		Diversify your projects such that you cover all types of problems - Regression, Classification, Clustering, NLP, etc. Every project should solve a business problem. Don't postpone your interview preparation till last minute. The last 15 days before interviews will be occupied with pre-placement talks, online tests, case study rounds and coding assignments.
Tata Communications -Data Science	1	2.1 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.2 Questions asked/skills tested in Technical Rounds? (Before Fil Interview)	2.3 Questions asked/skills tested in Technical Rounds?
